

Hello once again,

This PDF Document serves us as an addition to the already published eBook called

“Computer Automations”

In this Document you will be able to learn more about what Computer Automations can be created, for you, your co-workers and even for your company.

I like to split everything into three major categories.

- 1. Video Automations.**
- 2. Image Automations.**
- 3. File Automations.**

Before we dive into the Automations let's discuss briefly some Common Problems which you might have encounter already.

### **1. Common Video Problems.**

Video Files can be a little bit tricky when it comes to editing them, sending them over or when you just want to keep a Backup of all of your work.

There are so many different things that you need to take into consideration if you want your work to be to notch. FPS, Video Codecs / Bitrate, Formats and don't get me started on the Audio.

I will now, talk about some common problems which you will encounter.

1. If you are a content creator and you need to upload your videos into different platforms (TikTok, Instagram, YouTube, etc.) you need to convert your videos every time in order to match exactly the different specifications of the current platform.
2. Keeping Backup of your work can be a pain in the ass since Videos can be really big files, you will constantly need additional Storage. Additional Storage = More Money.
3. Transferring your Videos to your clients or your co-workers is also quite difficult if the Videos are many GB's.

4. In some cases the Videos can become corrupted in some parts. There might be something wrong with the Audio Channels for example which in many cases you might not even notice.
5. Every Video Editor I know, performs a Quality Check before handing over the Video that is created.

## **2. Common Image Problems.**

Images is such an amazing Media File in my opinion. Every Image is a still picture, but what happens if you put many Images together? Boom, you have successfully created a Video.

Once again, you should take into consideration a lot of things, Image Quality, File Format, Resolution, Figure Graphics.

I do not want to bore you out with me again listing out some common problems. Since problem 1 and 5 from the Video Automations, are quite similar when it comes to Images. So let's talk about the Files now.

## **3. Common File Problems.**

We live in a very strange age, everyone seems to be working from home, which means that they are working remotely from a PC. Every person is called to handle a lot of different Files, Spreadsheets, PDF's, Video, Images and many more which you already are familiar. Now, have you ever tried to sort everything out? It can be a really challenging and time consuming process, not to mention that you might do something wrong.

Enough with the Problems, let's talk about solutions now.

## **Meet the Automations.**

All of the Problems which we have discussed above, can be Fully Automated by Computer Automations that we can provide for you.

Let me repeat that once again,  
**FULLY AUTOMATED.**

### ***ProMation - Automation.***

ProMation is one Automation that I have created which comes from two different words, Professional and Automation. Why? Because simply, it does the following things:

- Performs a Quality Check on the Video. The Automation checks for 10 different things.
- Ensures that the Video has the correct specifications for the platform which you wish to upload it into. If something is off, the Automation corrects the Video itself.
- It notifies you after every process is done, via E-mail or Phone Notification.
- Also it implements one revolutionary solution that allows you to keep Backup of every Video, for example one Video that would be about 100GB is converted into a Video that you would be only 500MB. As you can see, this completely changes the way that you are keeping Backup.

### ***ThumbNailer – Automation.***

The ThumbNailer, is also one really nice Automation. Many times, you want your Video to have a Thumbnail. So, the Automation does exactly this. It scans the entire Video, searching for still Frames. By implementing some coding knowledge the Automation ONLY searches for frames that have Human Faces. After the search is completed the Automation exports 10 different Images inside folder that you wish. The only thing you have to do is just choose one that fits you best. Again, Phone Notifications or Email Notifications are available.

### ***The Fixer – Automation.***

One also really useful Automation is none other than The Fixer. It has the ability to scan the entire video and look for bad video frames or even frames that are completely black. With a revolutionary Black Detection filter which I have programmed, the Automation can fix the Video if something like this is

found. This Automation can be really useful if you are handling many Video Files and not have the time needed to go through all of them.

### ***File Sorter - Automation.***

The File Sorter does not care how many different file formats you have, or how many there are. It only cares about one thing. Sorting everything out. Specify which folders you want to have, for example a folder that would be called PDF, Excel Spreadsheet, Video, Image etc. And let the Automation do the rest. Once a new file is being created/found inside your Computer it will land in one of the folders which you would have specified.

### ***File Manipulator - Automation.***

One of my friends requested this. He works as an accountant for a company, so as you can guess he needs to be constantly updating many different Excls. But opening everyone one of them and inputting the new information is a time consuming task. So I have Automated the Process for him. All that he has to do, is copy/paste the new information into a new Text File, save it and after 3 minutes the Information is imported into the correct fields, inside the correct document.

### ***Security.***

You might be wondering now, how secure are those Computer Automations.

Let me take a quick break and talk about the security aspect of all of this.

The answer is that they are 100% secure. Why? Because they run directly from your PC. What that means? There are no Cloud Services involved, they can run even if your PC is not connected to an Internet Provider.

### ***Closure.***

Those were just a few examples from Automations that I have created for some of my clients. Every Automation was made according to what my client needed at that time. We can create basically everything you want in order to make your work much easier and save you valuable time.

The clients would just tell us what their daily work routine was and then we could automate things for them. Send us an email, so that we can arrange a call with you and go more in depth about the beautiful world of Computer Automations.
